

FOR IMMEDIATE RELEASE

Powercode® Partners with ImageStream Distributor Solutions4ebiz to Provide a Total Customer & Network Management Solution for ISPs

Orem, Utah and Indianapolis, Indiana – June 12, 2008 - [Powercode](#), a leading provider of customer and network management systems for Internet Service Providers (ISPs) and Wireless Internet Service Providers (WISPs), announced today a partnership with [Solutions4ebiz](#), an Internet technology solutions provider and key distributor of ImageStream routers and accessories. ImageStream routers are currently the exclusive Bandwidth Management Units for Powercode-managed networks. Solutions4ebiz will offer both the ImageStream routers and the integrated Powercode software available for purchase through its e-commerce website, www.imagestreamolutions.com.

“Solutions4ebiz is a great sales partner for Powercode,” said Martin Frey, Chairman and CEO of Powercode. “Their ability to sell our ISP management platform directly with the ImageStream routers that serve as our network “controllers” will enable our customers to get an integrated solution from a single provider.”

Powercode’s software works with the ImageStream routers to automate and simplify the management functions that many service providers face every day, such as bandwidth management, auto redirecting, billing, ticketing and installer management. For example, subscribers can log in to their customer portal and increase their bandwidth or change their entire plan with just a few clicks. Then the subscriber automatically and immediately receives the new service plan without having to wait on a customer service representative to update information or a network engineer to adjust network bandwidth settings.

“We’ve seen significant demand for Powercode’s management and billing system from our ISP and WISP customers,” said Jack Wilson, the President and CEO of Solutions4ebiz. “With Powercode software behind the ImageStream router’s bandwidth management functions, service providers not only streamline their billing, management, customer service and other functions, but their staff has more time to focus on revenue-generating activities. “

About Powercode

Powercode offers Internet Service Providers a fully integrated management system to provision and control their customers, billing, network, operations and services to improve their business operations, service quality and profitability. More information is available at www.Powercode.com.
